Technical Data

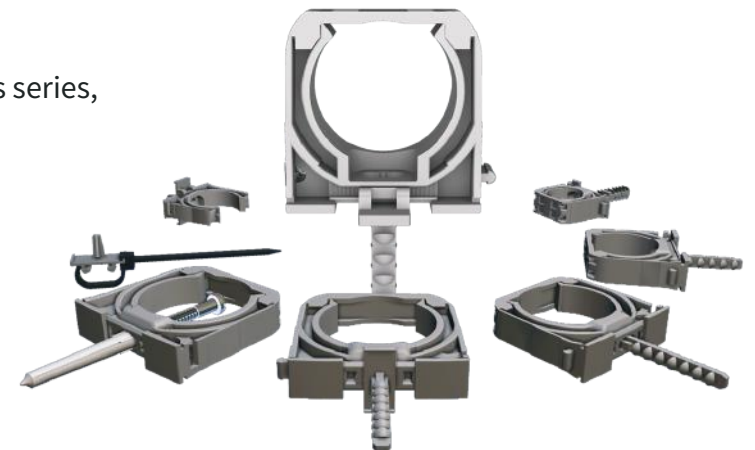

The Super-T represents the cutting-edge evolution of JSL in the conception and manufacture of highly efficient and comprehensive fixing / fastening materials.

This new series features a modern design focused on increasing functionality and installation versatility, while maintaining compatibility with previous equivalent fastening series and accessories.

Without compromising reliability, strength, and performance, the truncated design draws inspiration from the structural forms used in construction and engineering, embodying a clamp with a body structure based on the active principles of structures built with T-beams.

With the introduction of this new range of fastening products to the market, the aim is to replace/migrate customers from the previous equivalent series through a Product Rollover strategy.

The Super-T range will significantly increase production rates compared to the previous series, while simultaneously providing JSL customers with an extremely competent, comprehensive, and capable fastening solution to meet all their needs.
